

STANDPIPE DOWNSPOUT FILTER COLLECTOR (SF0304)

Function: The Standpipe Downspout Filter Collector connects to a single vertical rainwater downspout and can filter precipitation from a roof area up to 2,000 square feet for irrigation, car washing or other non-potable uses. The filter can be partially buried. The standpipe downspout filter collector is installed in the vertical rainwater downspout piping to direct debris to the stormwater system and divert up to 95% of the clean rainwater to an underground storage tank. The filter also acts as a first flush device.

REGULARLY FURNISHED:

Stainless steel housing with 0.011 inch (0.28 mm) stainless steel fine mesh filter

NOTES: Filter collector must be mounted plumb for proper operation.

A 90° elbow or optional 1" flexible hose (with 2" connection) must be installed directly on the 2" outlet to ensure proper filtration.

For a roof area above 2,000 square feet, additional standpipe downspout filter collectors should be added or a larger capacity filter should be used.

ACCESSORIES:

Blind Insert - Used in place of the mesh filter to divert flow directly to the stormwater system. Stainless steel.

1" flexible hose with 2" connection for downspout filter

Downspout clip with screw and wall plug- For securing the filter unit to a wall.

Downspout converter kit (specify):

- 2" x 3" Downspout kit
- 3" x 4" Downspout kit

NOTE: Dimensions shown in parentheses are in millimeters.
